

Child Integrated Eye Care Pathway Diagram

Entrance criteria:

Following Vision Screening: Children who are found to have reduced vision (worse than 0.20 LogMAR in one or both eyes) following vision screening and those unable to complete the test.

Redirected referrals: Referrals received by the hospital paediatric eye service may be triaged into the integrated service for investigation in primary care.

Transferred from HES: Children already under the care of the hospital paediatric eye service may be transferred for management in primary care, supported by a hospital-initiated management plan.

Upon discharge/onward referral, information is sent to the hospital paediatric service, offered to the parent/carer/guardian and copied to the GP.
